PROFESSIONAL SUMMARY

React.js Frontend Developer with production experience in React.js, TypeScript, JavaScript (ES6+), Tailwind CSS, and Shadcn UI. Delivered a JIRA-like ticketing system with drag-and-drop workflows and an interactive sales analytics dashboard with drill-down charts for HPCL business units. Skilled in data visualization (AmCharts, Recharts), reusable component architecture, REST API integration, performance optimization, role-based access control, and cross-browser UI development. Open to Frontend Developer, React Developer, and UI Developer roles.

WORK EXPERIENCE

UI Developer (Intern → Full-Time**)** *Sept 2025 – Feb 2026*
Algofusion Technologies Pvt Ltd, Bangalore

- Contributed to a production-grade sales analytics module for an HPCL-facing enterprise platform, rebuilding chart components using AmCharts and Recharts with drill-down functionality to transform raw sales data into interactive visual insights.
- Improved data exploration UX by replacing static drill-down charts with a dynamic pivot table, enabling non-technical users to slice, filter, and analyze complex sales performance metrics intuitively.
- Engineered 15+ reusable React components using TypeScript and Shadcn UI, reducing code duplication by ~40% and accelerating UI development with pixel-perfect responsive interfaces — optimized via lazy loading and debounce for performance across data-heavy views.
- Developed a scalable JIRA-like ticketing system with customizable workflow stages, drag-and-drop ticket management via React DnD, and full REST API integration for real-time ticket creation, assignment, and status updates.
- Implemented export functionality enabling users to download dashboard reports as PDF and Excel files using html2canvas, jsPDF, and SheetJS — improving data accessibility for non-technical stakeholders.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), TypeScript

Frontend Technologies: React.js, React Hooks, React Router, HTML5, CSS3, Tailwind CSS, Shadcn UI
Data Visualization: Recharts, AmCharts
API & Tools: REST APIs, Axios, Git, GitHub, VS Code, Postman

Familiar With: Python, Django, MySQL, React Native , Flutter

PROJECTS

1. Ticketing Management System (JIRA-like Tool)
Technologies Used: React.js | TypeScript | React DnD | REST APIs

- Built a JIRA-like project management tool with a fully customizable ticket lifecycle users can create new states and define their own workflow stages with conditional state transitions and role-based access control for structured ticket management.
- Implemented drag-and-drop ticket handling using React DnD with full REST API integration for real-time ticket creation, assignment, and status updates across the workflow board.
- Developed OTP-based authentication and parent-child ticket hierarchy to support secure login and multi-level task delegation across teams.

2. React Analytics Dashboard
Technologies Used: React.js | TypeScript | Tailwind CSS | Shadcn UI | AmCharts | Recharts

- Built a fully responsive analytics dashboard inspired by Material Dashboard, featuring metric cards, interactive charts, data tables, and notifications with a clean, modern UI using Shadcn and Tailwind CSS.
- Implemented dynamic data visualizations using AmCharts and Recharts including bar, line, and drill-down charts delivering real-time insights and actionable analytics across multiple dashboard sections.

- Optimized application performance via code-splitting and lazy loading, built modular reusable components (cards, sidebars, modals, buttons), and ensured cross-browser compatibility throughout.

3. Complaint & Service Management System
Technologies Used: React | Django | MySQL

- Architected a full-stack service platform where users can raise, track, and resolve home service requests (electrical, plumbing, appliances) with real-time technician assignment and image upload support.
- Built a role-based access system with JWT authentication separating user and technician flows; technicians can register with specialization details, browse available requests, and accept matching jobs.
- Developed RESTful Django APIs for request lifecycle management, designed optimized MySQL schemas for relational data, and built a responsive React frontend with Axios-driven real-time updates and form validations.

EDUCATION

BSc Computer Science (MPCS) *2023*
Sri Veera Venkata Satya Dev Degree College, Andhra Pradesh, CGPA: 6.82

EXTRACURRICULAR ACTIVITIES

- NCC Cadet with C & B Certificates
- Prathamik Examination Certificate (2014)

CERTIFICATIONS

- Python Development Internship – Main Flow & Technologies Pvt. Ltd.
- Web Designing – Completed a certified course from BIRED.org
